Priority date (day/month/year)  
11 Feb. 1998 (11.02.98)

Applicant

I. S. MOTOR KOREA CO., LTD. et al.

1. The applicant is hereby **notified** that this International Preliminary Examining Authority considers the following date as the date of receipt of the demand for international preliminary examination of the international application:  
2 Aug. 1999 (02.08.99)

2. That date of receipt is:

the actual date of receipt of the demand by this Authority (Rule 61.1(b)).  
 the actual date of receipt of the demand on behalf of this Authority (Rule 59.3(e)).  
 the date on which this Authority has, in response to the invitation to correct defects in the demand (Form PCT/IPEA/404), received the required corrections.

3.  **ATTENTION:** That date of receipt is AFTER the expiration of 19 months from the priority date. Consequently, the election(s) made in the demand does (do) not have the effect of postponing the entry into the national phase until 30 months from the priority date (or later in some Offices) (Article 39(1)). Therefore, the acts for entry into the national phase must be performed within 20 months from the priority date (or later in some Offices) (Article 22). For details, see the *PCT Applicant's Guide*, Volume II.

*(If applicable)* This notification confirms the information given by telephone, facsimile transmission or in person on:

4. Only where paragraph 3 applies, a copy of this notification has been sent to the International Bureau.

**Attention:** The amount of the handling fee was changed on 02 March 1999  
to ATS 2.036,52.

The communication will be made to those Offices only upon their request. Furthermore, those Offices do not require the applicant to furnish a copy of the international application (Rule 49.1(a-bis)).

3. Enclosed with this Notice is a copy of the international application as published by the International Bureau on  
19 August 1999 (19.08.99) under No. WO 99/41829

**REMINDER REGARDING CHAPTER II (Article 31(2)(a) and Rule 54.2)**

If the applicant wishes to postpone entry into the national phase until 30 months (or later in some Offices) from the priority date, a **demand for international preliminary examination** must be filed with the competent International Preliminary Examining Authority before the expiration of 19 months from the priority date.

It is the applicant's sole responsibility to monitor the 19-month time limit.

Note that only an applicant who is a national or resident of a PCT Contracting State which is bound by Chapter II has the right to file a demand for international preliminary examination.

**REMINDER REGARDING ENTRY INTO THE NATIONAL PHASE (Article 22 or 39(1))**

If the applicant wishes to proceed with the international application in the **national phase**, he must, within 20 months or 30 months, or later in some Offices, perform the acts referred to therein before each designated or elected Office.

For further important information on the time limits and acts to be performed for entering the national phase, see the Annex to Form PCT/IB/301 (Notification of Receipt of Record Copy) and Volume II of the PCT Applicant's Guide.

1. This international preliminary examination report has been prepared by this International Preliminary Examination Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 3 sheets, including this cover sheet.

This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of \_\_\_\_\_ sheets.

3. This report contains indications relating to the following items:

- I  Basis of the report
- II  Priority
- III  Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV  Lack of unity of invention
- V  Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI  Certain documents cited
- VII  Certain defects in the international application
- VIII  Certain observations on the international application

Date of submission of the demand <b>02 August 1999 (02.08.99)</b>	Date of completion of this report <b>05 May 2000 (05.05.00)</b>
Name and mailing address of the IPEA/AT <b>Austrian Patent Office Kohlmarkt 8-10 A-1014 Vienna Facsimile No. 1/53424/200</b>	Authorized officer <b>Dimitrow</b> Telephone No. 1/53424/340

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/KR 99/00069

**I. Basis of the report**

1. With regard to the elements of the international application:\*

the international application as originally filed

the description:

pages \_\_\_\_\_, as originally filed

pages \_\_\_\_\_, filed with the demand

pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_.

the claims:

pages \_\_\_\_\_, as originally filed

pages \_\_\_\_\_, as amended (together with any statement) under Article 19

pages \_\_\_\_\_, filed with the demand

pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_.

the drawings:

pages \_\_\_\_\_, as originally filed

pages \_\_\_\_\_, filed with the demand

pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_.

the sequence listing part of the description:

pages \_\_\_\_\_, as originally filed

pages \_\_\_\_\_, filed with the demand

pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_.

2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language \_\_\_\_\_ which is:

the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).

the language of publication of the international application (under Rule 48.3(b)).

the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

contained in the international application in written form.

filed together with the international application in computer readable form.

furnished subsequently to this Authority in written form.

furnished subsequently to this Authority in computer readable form.

The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4.  The amendments have resulted in the cancellation of:

the description, pages \_\_\_\_\_.

the claims, Nos. \_\_\_\_\_.

the drawings, sheets/fig \_\_\_\_\_.

5.  This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).\*\*

\* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as „originally filed“ and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).

\*\* Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

National application No.  
PCT/KR 99/00069

## V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

## 1. Statement

Novelty (N)	Claims	1-4	YES NO
	Claims		
Inventive step (IS)	Claims	2	YES NO
	Claims	1,3,4	
Industrial applicability (IA)	Claims	1-4	YES NO
	Claims		

## 2. Citations and explanations (Rule 70.7)

The following documents were cited in the search report:

D1 US 4882524 A  
 D2 US 4484115 A  
 D3 US 5327069 A  
 D4 DE 2101937 A

Document D1 shows a multi-phase bipolar brushless D.C. Motor with the features of claim 1. Each phase has a plurality of windings which however are connected in series.

Document D2 shows a brushless D.C. Motor, whose armature windings are connected together at one end and connected to respective commutating devices at the other ends.

In combination of document D1 with document D2 the subject-matter of claims 1,3 and 4 is considered not to include an inventive step. The selection of the type of circuit is a matter of normal design procedure. The skilled person would regard the necessary circuits according to the measures of claim 1, 3 or 4 as a normal design possibility in order to solve the problem posed.

Documents D3 and D4 show the state of the art only.

Industrial applicability is given for all claims.

PCT

REQUEST

The undersigned requests that the present international application be processed according to the Patent Cooperation Treaty.

For receiving Office use only

International Application No.

International Filing Date

Name of receiving Office and "PCT International Application"

Applicant's or agent's file reference  
(if desired) (12 characters maximum) PIS115/PCT

Box No. I TITLE OF INVENTION

CONSTANT-POWER BRUSHLESS DC MOTOR

Box No. II APPLICANT

Name and address: (Family name followed by given name; for a legal entity, full official designation. The address must include postal code and name of country. The country of the address indicated in this Box is the applicant's State (that is, country) of residence if no State of residence is indicated below.)

I. S. MOTOR KOREA CO., LTD.

7-326 INCHON INDUSTRIAL GOODS CENTER, 129,  
SONGHYUN-DONG, TONG-GU, INCHON, 401-040,  
REPUBLIC OF KOREA

This person is also inventor.

Telephone No.  
(82)-(032)-589-7090

Facsimile No.  
(82)-(032)-589-7093

Teleprinter No.

State (that is, country) of nationality:

KR

State (that is, country) of residence:

KR

This person is applicant for the purposes of:

all designated States

all designated States except the United States of America

the United States of America only

the States indicated in the Supplemental Box

Box No. III FURTHER APPLICANT(S) AND/OR (FURTHER) INVENTOR(S)

Name and address: (Family name followed by given name; for a legal entity, full official designation. The address must include postal code and name of country. The country of the address indicated in this Box is the applicant's State (that is, country) of residence if no State of residence is indicated below.)

LEE, I SOO

123 KOKAN-RI, JINJUN-MYUN, HAPO-GU, MASAN-CITY,  
KYUNGSANGNAM-DO, 631-830, REPUBLIC OF KOREA

This person is:

applicant only

applicant and inventor

inventor only (If this check-box is marked, do not fill in below.)

State (that is, country) of nationality:

KR

State (that is, country) of residence:

KR

This person is applicant for the purposes of:

all designated States

all designated States except the United States of America

the United States of America only

the States indicated in the Supplemental Box

Further applicants and/or (further) inventors are indicated on a continuation sheet.

Box No. IV AGENT OR COMMON REPRESENTATIVE; OR ADDRESS FOR CORRESPONDENCE

The person identified below is hereby/has been appointed to act on behalf of the applicant(s) before the competent International Authorities as:

agent

common representative

Name and address: (Family name followed by given name; for a legal entity, full official designation. The address must include postal code and name of country.)

GAM, DONG HOON

Telephone No.

(82)-(02)-554-9001

GAM DONG HOON INT'L PATENT & LAW OFFICE  
NO.207, NEW SEOUL BLDG., 828-8, YEOKSAM-DONG,  
KANGNAM-GU, SEOUL, 135-080, REPUBLIC OF KOREA

Facsimile No.

(82)-(02)-557-9004

Teleprinter No.

Address for correspondence. Mark this check box if a special address to which correspondence should be sent is indicated in the space above.

## Box No.V DESIGNATION OF STATES

The following designations are hereby made under Rule 4.9(a) (mark the applicable check-boxes; at least one must be marked):

## Regional Patent

AP **ARIPO Patent:** GH Ghana, GM Gambia, KE Kenya, LS Lesotho, MW Malawi, SD Sudan, SZ Swaziland, UG Uganda, ZW Zimbabwe, and any other State which is a Contracting State of the Harare Protocol and of the PCT

EA **Eurasian Patent:** AM Armenia, AZ Azerbaijan, BY Belarus, KG Kyrgyzstan, KZ Kazakhstan, MD Republic of Moldova, RU Russian Federation, TJ Tajikistan, TM Turkmenistan, and any other State which is a Contracting State of the Eurasian Patent Convention and of the PCT

EP **European Patent:** AT Austria, BE Belgium, CH and LI Switzerland and Liechtenstein, CY Cyprus, DE Germany, DK Denmark, ES Spain, FI Finland, FR France, GB United Kingdom, GR Greece, IE Ireland, IT Italy, LU Luxembourg, MC Monaco, NL Netherlands, PT Portugal, SE Sweden, and any other State which is a Contracting State of the European Patent Convention and of the PCT

OA **OAPI Patent:** BF Burkina Faso, BJ Benin, CF Central African Republic, CG Congo, CI Côte d'Ivoire, CM Cameroon, GA Gabon, GN Guinea, ML Mali, MR Mauritania, NE Niger, SN Senegal, TD Chad, TG Togo, and any other State which is a member State of OAPI and a Contracting State of the PCT (if other kind of protection or treatment desired, specify on dotted line) .....

Check-boxes reserved for designating States (for the purposes of a national patent) which have become party to the PCT after issuance of this sheet:

.....

.....

**Precautionary Designation Statement:** In addition to the designations made above, the applicant also makes under Rule 4.9(b) all other designations which would be permitted under the PCT except any designation(s) indicated in the Supplemental Box as being excluded from the scope of this statement. The applicant declares that those additional designations are subject to confirmation and that any designation which is not confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. (Confirmation of a designation consists of the filing of a notice specifying that designation and the payment of the designation and confirmation fees. Confirmation must reach the receiving Office within the 15-month time limit.)

Box No. VI PRIORITY CLAIM		<input type="checkbox"/> Further priority claims are indicated in the Supplemental Box.		
Filing date of earlier application (day/month/year)	Number of earlier application	Where earlier application is:		
		national application: country	regional application: * regional Office	international application: receiving Office
item (1) 11 FEBRUARY, 1998 (11. 02. 98)	1998-3917	KR		
item (2)				
item (3)				

The receiving Office is requested to prepare and transmit to the International Bureau a certified copy of the earlier application(s) (only if the earlier application was filed with the Office which for the purposes of the present international application is the receiving Office) identified above as item(s):

\* Where the earlier application is an ARIPO application, it is mandatory to indicate in the Supplemental Box at least one country party to the Paris Convention for the Protection of Industrial Property for which that earlier application was filed (Rule 4.10(b)(ii)). See Supplemental Box.

#### Box No. VII INTERNATIONAL SEARCHING AUTHORITY

Choice of International Searching Authority (ISA) (if two or more International Searching Authorities are competent to carry out the international search, indicate the Authority chosen; the two-letter code may be used):	Request to use results of earlier search; reference to that search (if an earlier search has been carried out by or requested from the International Searching Authority):		
	Date (day/month/year)	Number	Country (or regional Office)

ISA / AT

#### Box No. VIII CHECK LIST; LANGUAGE OF FILING

This international application contains the following number of sheets:

request	: 3
description (excluding sequence listing part)	: 13
claims	: 2
abstract	: 1
drawings	: 10
sequence listing part of description	: _____
Total number of sheets	: 29

This international application is accompanied by the item(s) marked below:

- fee calculation sheet
- separate signed power of attorney
- copy of general power of attorney; reference number, if any:
- statement explaining lack of signature
- priority document(s) identified in Box No. VI as item(s):
- translation of international application into (language):
- separate indications concerning deposited microorganism or other biological material
- nucleotide and/or amino acid sequence listing in computer readable form
- other (specify): \_\_\_\_\_

Figure of the drawings which should accompany the abstract: 1

Language of filing of the international application: ENGLISH

#### Box No. IX SIGNATURE OF APPLICANT OR AGENT

Next to each signature, indicate the name of the person signing and the capacity in which the person signs (if such capacity is not obvious from reading the request).

GAM, DONG HOON

For receiving Office use only

1. Date of actual receipt of the purported international application:	2. Drawings:
3. Corrected date of actual receipt due to later but timely received papers or drawings completing the purported international application:	<input type="checkbox"/> received: <input type="checkbox"/> not received:
4. Date of timely receipt of the required corrections under PCT Article 11(2):	
5. International Searching Authority (if two or more are competent): ISA /	6. <input type="checkbox"/> Transmittal of search copy delayed until search fee is paid.

For International Bureau use only

Date of receipt of the record copy by the International Bureau:

See Notes to the request form

This sheet is not part of and does not count as a sheet of the international application.

(54) Title: CONSTANT-POWER BRUSHLESS DC MOTOR

## (57) Abstract

A constant-power brushless DC motor is provided, including a stator which is wound in parallel by phases and polarities and configured of  $n$  multi-phases, a rotor having a predetermined number of polarities, which is required to concentrate magnetic flux on its area, a commutation encoder including sensing regions and nonsensing regions, and two photo sensors set to each phase, the two photo sensors being connected to a controller, to excite only  $(n-b)$  phases among  $n$  phases, starting and rotating the motor, thereby realizing a constant-power DC motor without commutator, which is effective in energy saving, has good characteristic of continuous speed conversion and compact configuration.

CONSTANT-POWER BRUSHLESS DC MOTORTECHNICAL FIELD

The present invention relates to a new motor system, 5 and in particular, to a constant-power brushless DC motor, which is effective in energy saving, has good characteristic of speed conversion from a low speed to a high speed, has no torque ripple, produces high power with a low voltage, has excellent stable speed characteristic 10 and high efficiency, has compact configuration not to require a cooling system, and is able to be fabricated in full automation with low production cost.

BACKGROUND ART

15 A conventional DC motor has problems that its brush and commutator are worn with the lapse of time, its configuration is complicated, and requires a high production cost. Especially, it is difficult to obtain a high speed of above 6000rpm using a conventional power 20 motor. With an AC inverter motor, its start torque is weak, controller needs high cost, and constant-power cannot be produced. Furthermore, a reluctance motor is inferior to other motors in terms of fabrication cost, size and weight, and does not produce constant-power. In general, a 25 brushless DC motor is widely used as a small-sized motor. However, it is difficult to fabricate the surface of permanent on which a rotor is set, its controller carries out four-quadrant control, requiring high cost, and constant-power cannot be produced. Moreover, the brushless 30 DC motor cannot completely solve problems of nonuniform rotation, torque ripple and heat generation.

DISCLOSURE OF INVENTION

Accordingly, the present invention is directed to a constant-power brushless DC motor that substantially obviates one or more of the problems due to limitations and disadvantages of the related art.

5 An object of the present invention is to provide a constant-power brushless DC motor, which has no torque ripple, produces high power with a low voltage, has excellent stable speed characteristic and high efficiency, has compact configuration not to require a cooling system, 10 and is able to be fabricated in full automation with low production cost.

To accomplish the object of the present invention, there is provided a constant-power brushless DC motor, including: a stator which is wound in parallel by phases 15 and polarities and configured of n multi-phases, each of the winding coils of the stator which are not connected with one another is connected to each of n full H-bridges, n full H-bridges are connected to a DC power supply in parallel; a rotor having a predetermined number of 20 polarities, which is required to concentrate magnetic flux on its area; a commutation encoder including sensing regions and nonsensing regions, the commutation encoder being externally set to one side of the shaft of the rotor; and two photo sensors set to each phase, the two photo 25 sensors being connected to half H-bridge of each phase, to turn on/off the half H-bridge, the distance between the sensing regions of the commutator encoder is determined to allow a phases among n phases to be excited all the time, the a photo sensors recognizing the a phases excited.

30 It is preferable that the stator has narrow slots to remove cancel phenomenon. The number of phase among the n phases, which will be excited, is determined by the distance between the sensing regions, the distance between the sensing regions being determined through the following

expression,

distance between sensing regions

=  $(2\pi \times \text{number of phases to be excited}) / (\text{number of polarities of rotor} \times \text{number of phases of motor})$  (°)

5 the number of sensing regions in the commutation encoder being determined through the following expression,

number of sensing regions

=  $(\text{number of polarities of rotor}) / 2$

10 the distance between the photo sensors on a sensor plate being determined by the following expression,

distance between photo sensors

=  $2\pi / (\text{number of polarities of rotor} \times \text{number of phases of motor})$  (°)

15 among the  $n$  phases,  $a$  phases being excited but  $b$  phases not being excited all the time. It is preferable that  $b \geq 1$ ,  $b$  corresponding to the number of phases inexcited.

20 The constant-power brushless DC motor of the present invention, which has multi-phases of 2, 3, 4, 5, 6, ...,  $n$  phases, is configured of 1, 2, 3, 4, 5, ...,  $a$  phases excited and 1, 2, 3, 4, 5, ...,  $b$  phases inexcited, to alternate the excited phases and inexcited phases, being started and rotated. The rotor is configured of a permanent magnet, the stator is configured of independent winding in 25 multi-phases, and the commutation encoder is externally fixed to one side of the shaft of the rotor to be rotated. The  $n$  phases include  $2n$  sensors which are connected to the switching stage to sense the location of the rotor, indicating the direction and interval of current, thereby 30 starting and rotating the motor. The stator, rotor, sensors and controller are constructed to be automatically fabricated, reducing the manufacture cost.

It is to be understood that both the foregoing general description and the following detailed description are

exemplary and explanatory and are intended to provide further explanation of the invention as claimed.

#### BRIEF DESCRIPTION OF THE DRAWINGS

5 The accompanying drawings, which are included to provide a further understanding of the invention and are incorporated in and constitute a part of this specification, illustrate embodiments of the invention and together with the description serve to explain the  
10 principles of the invention:

In the drawings:

Fig. 1 is a block diagram of a constant-power brushless DC motor according to the present invention;

15 Fig. 2A illustrates the back of photo sensor of the constant-power brushless DC motor according to the present invention;

Fig. 2B is a cross-sectional view of the sensor of Fig. 2A;

Fig. 5B illustrates that the commutation encoder and

photo sensors of 5-phase 6-polarity motor are set on the rotor;

Fig. 6 illustrates torque generated when three phases are excited in 5-phase 6-polarity motor;

5 Fig. 7A illustrates that the distance corresponding to three phases is advanced-commutated in 8-phase 6-polarity motor;

10 Fig. 7B illustrates that the distance corresponding to five phases is advanced-commutated in 8-phase 6-polarity motor; and

Fig. 8 illustrates constant-power characteristic of the constant-power brushless DC motor according to the present invention.

15 **BEST MODE FOR CARRYING OUT THE INVENTION**

Reference will now be made in detail to the preferred embodiments of the present invention, examples of which are illustrated in the accompanying drawings.

20 The configuration of the constant-power brushless DC motor according to the present invention is explained below. Its stator, configured of  $n$  phases, is connected to the electronic commutator in parallel, each phase being independently wound. The rotor configured of a permanent magnet has a predetermined number of polarities of 2, 4, 6, 25 8, ... to meet the design of the stator. The commutation encoder has a cylindrical shape constructed in such a manner that a ring-shape plate is mounted on the edge of a round-shape plate. The encoder includes a sensing region sensed by a photo sensor and nonsensing region, the sensing 30 region being formed by cutting the ring-shape plate to excite  $(n-b)$  phases. That is, the sensing region allows a phases among the  $n$  phases to be excited all the time.

With the photo sensor, each phase has two photo

sensors which operate in accordance with the commutation encoder. One photo sensor and the other photo sensor of one phase are placed in the angle of space between polarities of the rotor, being separated from each other. The photo 5 sensors of each phase are sequentially arranged on the angle of space between phases. With the electronic commutator, each coil having multi-phases is connected to a predetermined number of full H-bridge, corresponding to the number of phases, and each of the two photo sensors of 10 each phase is connected to a half H-bridge. The electronic commutator and each H-bridge are connected to power supply in parallel. According to the aforementioned configuration, the present invention accomplishes the constant-power 15 brushless DC motor having continuous speed conversion and uniform efficiency.

Fig. 1 is a block diagram of the constant-power brushless DC motor according to the present invention, which shows 5-phase stator, rotor, commutation encoder and control encoder which construct the rotor (stator and 20 rotor), controller and power supply system. For open loop operation, the motor is controlled by only pulse width modulation control without employing the control encoder or control encoder logic. For closed loop operation, the 25 control encoder, control encoder logic and input buffer logic are compared with the pulse width modulation control logic, performing speed control or location control with pulse width modulation. The motor is controlled by only pulse width modulation without using variable frequency 30 control or vector control, resulting in easy control of motor and simple circuit configuration.

Figs. 2A and 2B illustrate the sensor of 5-phase 6-polarity motor. The commutation encoder and control encoder are externally fixed on one side of the shaft of the rotor placed outside the bracket on the back of the rotor, being

rotated with the rotor. The sensor board on which the photo sensors are placed is set on the circumference of the bracket. The sensor board is adjusted to be set to allow advanced commutation. The control encoder is constructed in 5 a manner that openings(or slots) are formed in desired portions of the ring-shape plate to allow the photo sensor to emit pulses, as shown in Fig. 1 and 2A. Here, the size of the trenches and partition angle between them depend on the characteristics of speed control or location control of 10 the motor.

Fig. 3A illustrates the wrought silicon (steel) plate (or laminated plate) of 5-phase 6-polarity typed stator, constructed in such a manner that narrow slots are formed between winding slots. Fig. 3B illustrates the winding of 15 the 5-phase 6-polarity stator. Each of five phases is independently wound in parallel, being wound in parallel for each polarity, constructing the stator. Fig. 4A illustrates a 6-polarity permanent magnet rotor. Referring to Fig. 4A, a bar type permanent magnet is inserted into 20 laminated silicon (steel) plate which is combined with the dove tail type holder of non-magnetic hub, constructing the rotor. Fig. 4B illustrates the external rotor pan-cake type permanent magnet rotor, and Fig. 4C illustrates a slip ring type electro-magnet rotor.

25 Figs. 5A and 5B illustrate the electronic commutator circuit of 5-phase 6-polarity motor. In configuration of the commutation encoder, the number of sensing regions, that is, light emission recognition parts, is determined according to the following expression.

30 The number of sensing regions  
= the number of polarities of rotor/2

Accordingly, the number of sensing regions in the 5-phase 6-polarity motor shown in Fig. 5 corresponds to 3. The width (angle of shaft) of sensing region is determined

by the following expression.

The width of sensing region

$$= \{2\pi / (\text{number of polarities} \times \text{number of phases})\} \times \text{number of phases to be excited } (^{\circ})$$

5 Accordingly, with the 5-phase 6-polarity motor shown in Fig. 5, only three phases are excited to make the angle of shaft of sensing region  $36^{\circ}$ . Referring to Figs. 5A and 5B,  $PA_1$  connected to  $Q1$  and  $Q4$  of half bridge whose one phase is excited and  $PA_2$  connected to  $Q2$  and  $Q3$  of another 10 half bridge whose one phase is excited are located at the same position of different polarities. Thus, when the circuit is electrified,  $PA_1$  of one phase is located in the sensing region to emit positive pulse, turning on half bridge  $Q1$  and  $Q4$  of Fig. 5A. This make the coil 15 electrifying, and the coil looped by  $Q1$  and  $Q4$  is excited. While the rotor rotates, turning-on interval of half bridge  $Q1$  and  $Q4$  is identical to the width of the sensing region of the commutation encoder. That is, excitation interval of half bridge  $Q1$  and  $Q4$  corresponds to shaft angle of  $36^{\circ}$ .

20 When the shaft angle is next  $24^{\circ}$  ( $60^{\circ} - 36^{\circ}$ ),  $PA_1$  and  $PA_2$  are placed in nonsensing region, turning off  $Q1$ ,  $Q4$ ,  $Q2$  and  $Q3$  of one-phase half bridge. Then,  $PA_2$  like as  $PA_1$  turn 25 on  $Q2$  and  $Q3$  according to rotation of the commutation encoder, to allow one phase to independently become electrified, starting the rotor. The photo sensors are set on the sensor plate of Fig. 5B, having interval of  $2\pi / (\text{number of polarities} \times \text{number of phases}) (^{\circ})$ . In Fig. 5B, for example, ten photo sensors are arranged, having the 30 interval of  $12^{\circ}$ . The interval between two photo sensors of each phase corresponds to  $2\pi / (\text{number of polarities of rotor})$ . Thus, the distance between  $PA_1$  and  $PA_2$  is  $60^{\circ}$ .

As shown in Figs. 5A and 5B, three phases are excited but two phases are inexcited all the time in 5-phase 6-polarity motor. Accordingly, excitation interval and

inexcitation interval of each phase are determined by the following expressions.

Excitation angle

$$= \pi \times (\text{number of excited phases}) / (\text{number of phases}) \text{ (}^\circ\text{)}$$

5 Inexcitation angle

$$= \pi \times (\text{number of inexcited phases}) / (\text{number of phases}) \text{ (}^\circ\text{)}$$

Thus, the excitation angle and inexcitation angle of each phase of Fig. 5 are  $108^\circ$  and  $72^\circ$ , respectively.

Fig. 6 shows pulse output of each photo sensor, 10 direction of current input and delineation and interval of torque of 5-phase 6-polarity motor. The coil becomes electrified with current having the interval identical to the pulse transmitted by each photo sensor depending on the distance between the sensing regions of the commutation 15 encoder, resulting in generation of torque. Thus, square and partial current wave is inputted and power of scheme of rectangular torque is outputted. Accordingly, three phases are excited and two phases are inexcited all the time in 5-phase 6-polarity motor shown in Fig. 5. Consequently, the 20 sum total of torque corresponds to linear torque scheme.

As shown in Figs. 5 and 6, the number of phases of the motor, which will be excited, depends on the distance between the sensing regions of the commutation encoder. The 25 motor of the present invention solves all problems which occur in pole changing area. Specifically, the motor of the present invention is constructed in a manner that more than one of multi-phases are not excited to produce advanced commutation, resulting in smooth high-speed rotation.

In the process of converting electric energy into 30 mechanical energy by the motor, timing that the stator coil is electrified to be excited to allow active magnetic flux to generate magnetic motive force is delayed from timing that passive magnetic flux of rotor which rotates in high speed is operated. Accordingly, advanced commutation is

required to make the timings coincide with each other. Fig. 7A illustrates 8-phase 6-polarity motor in which only five phases are excited and the distance corresponding to three phases inexcited is advanced-commutated. Fig. 7B 5 illustrates 8-phase 6-polarity motor in which three phases are excited and the distance corresponding to five phases inexcited is advanced-commutated. The motor of Fig. 7A can be rotated faster than the motor of Fig. 7B.

Furthermore, in construction of very high-speed motor, 10 the commutation encoder logic performs electronic combination changing for each photo sensor together with advanced photo sensor depending on microprocessor, performing gradual advanced commutation to meet a desired speed.

15 Fig. 8 illustrates the relationship between torque and speed of the constant-power brushless DC motor. As shown in Fig. 8, the DC motor of the present invention has constant-power characteristic. Furthermore, the DC motor of the present invention has CW and CCW capability and 20 bidirectional operation. That is, when the commutation encoder logic in Figs. 1 and 5 performs electronic combination changing for dual photo sensors included in each phase, the motor smoothly starts and rotates from forward direction to reverse direction or from reverse 25 direction to forward direction. When electronic combination changing of photo sensor is carried out frequently within 5/1000sec, bidirectional operation is easily activated. The DC motor of the present invention also has linear motor function. Specifically, ideal linear motor can be realized 30 when the stator of motor is configured of linear type and its rotor is constructed to operate linearly.

According to the present invention, narrow slot of the stator removes collision of magnetic flux which is generated when the coil of each phase is electrified,

improving the efficiency of the motor. There is no current loss and uniform electrification is carried out when the coil is in electrified, resulting in motor without torque ripple and controller with stability. Furthermore, the 5 stator is parallel-wound by phases and polarities to allow the motor to produce a high power with a low voltage. The stator's parallel winding enables automatic production of motor, reducing the cost and making mass production possible.

10 Moreover, since magnetic flux is concentrated on the rotor area, passive magnetic flux of the rotor corresponds to active magnetic flux of the stator, realizing high-power motor using permanent magnet rotor. The surface of the rotor is machined to minimize empty space, improving the 15 efficiency of the motor. Because there is no limitation in the number of polarity, size, shape of the rotor, long drum type or pan-cake type motor can be designed unrestrictedly for purposes. The rotor is assembled into the motor to allow automatic production, reducing the cost and enabling 20 mass production.

Meanwhile, in commutation motors, motors using full sine wave or full square wave generate brake torque, back electromotive force(EMF), reactance (inductive reactance and capacitive reactance) and harmonic wave in pole 25 changing area, so as to bring about iron loss and copper loss in the motor, impacting the controller. Furthermore, heat generates in the motor, to require cooling system and deteriorate its efficiency. However, the motor of the present invention does not apply current to the phase which 30 is placed in pole changing area, to solve the above problems, eliminating necessity of cooling system and improving the efficiency of motor.

Moreover, partial square wave maximizes rms torque capacitance and peak torque value. Thus, the motor becomes

compact and its efficiency is improved. Furthermore, The controller does not require cross fire prevention device, to simplify its circuit with stability, improving reliability and reducing the cost. The magnetic flux 5 densities and permeability of the stator and rotor are identical because they are configured of the same material, silicon steel plate. Thus, characteristic of relation between current and torque is perfect, and characteristic of relation between current and speed is also excellent. 10 This allows the motor to produce constant-power, resulting in uniform efficiency for all speed ranges.

The torque of conventional motor is sinusoidal torque scheme or trapezoidal torque scheme, causing torque ripple. The motor of the present invention applies partial square 15 wave to the winding coil of each phase, to allow each phase to realize rectangular torque scheme, the total torque becoming linear torque scheme. Accordingly, the motor according to the present invention has no torque ripple and smoothly starts and rotates. Furthermore, with the 20 constant-power brushless DC motor of the present invention, while b phases among n phases are inexcited, advanced commutation is performed for the distance corresponding to the b phases inexcited. Therefore, the present invention realizes the constant-power motor having continuous speed 25 conversion and uniform efficiency. The motor carries out electronic neutral commutation according to the microprocessor, to perform smooth CW-CCW control, bidirectional control with high speed, and smooth position control.

30 It will be apparent to those skilled in the art that various modifications and variations can be made in the constant-power brushless DC motor of the present invention without departing from the spirit or scope of the invention. Thus, it is intended that the present invention

cover the modifications and variations of this invention provided they come within the scope of the appended claims and their equivalents.

**WHAT IS CLAIMED IS:**

1. A constant-power brushless DC motor, comprising:
  - a stator which is wound in parallel by phases and polarities and configured of n multi-phases, each of the 5 winding coils of the stator which are not connected with one another is connected to each of n full H-bridges, n full H-bridges are connected to a DC power supply in parallel;
  - a rotor having a predetermined number of polarities, 10 which is required to concentrate magnetic flux on excitation area;
  - a commutation encoder including sensing regions and nonsensing regions, the commutation encoder being externally set to one side of the shaft of the rotor; and
  - 15 two photo sensors set to each phase, the two photo sensors being connected to half H-bridge of each phase, to turn on/off the half H-bridge, the distance between the sensing regions of the commutator encoder is determined to allow a phases among n phases to be excited all the time, 20 the a photo sensors recognizing the a phases excited.
2. The motor as claimed in claim 1, wherein the stator has narrow slots to remove cancel phenomenon.
- 25 3. The motor as claimed in claim 3, wherein the number of phase among the n phases, which will be excited, is determined by the distance between the sensing regions, the distance between the sensing regions being determined through the following expression,
  - 30 distance between sensing regions  
=  $(2\pi \times \text{number of phases to be excited}) / (\text{number of polarities of rotor} \times \text{number of phases of motor})$  ( $^{\circ}$ )  
the number of sensing regions in the commutation

encoder being determined through the following expression,  
number of sensing regions  
= (number of polarities of rotor)/2  
the distance between the photo sensors on a sensor  
5 plate being determined by the following expression,  
distance between photo sensors  
=  $2\pi / (\text{number of polarities of rotor} \times \text{number of phases}$   
of motor) (°)  
among the n phases, a phases being excited but b  
10 phases not being excited all the time.

4. The motor as claimed in claim 3, wherein  $b \geq 1$ , b  
corresponding to the number of phases inexcited.

NOTIFICATION OF TRANSMITTAL OF  
 THE INTERNATIONAL SEARCH REPORT  
 OR THE DECLARATION

(PCT Rule 44.1)

Date of mailing  
 (day/month/year) 10 Mai. 2000 (10.05.00)

Applicant's or agent's file reference

PIS115/PCT

FOR FURTHER ACTION See paragraphs 1 and 4 below

International application No.

PCT / KR 99/00069

International filing date  
 (day/month/year)

9 Feb. 1999 (09.02.99)

Applicant

I. S. MOTOR KOREA CO., LTD. et al.

1.  The applicant is hereby notified that the international search report has been established and is transmitted herewith.

## Filing of amendments and statement under Article 19:

The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report; however, for more details, see the notes on the accompanying sheet.

Where? Directly to the International Bureau of WIPO  
 34, chemin des Colombettes  
 1211 Geneva 20, Switzerland  
 Facsimile No.: (41-22) 740.14.35

For more detailed instructions, see the notes on the accompanying sheet.

2.  The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect is transmitted herewith.

3.  With regard to the protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:

- the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.
- no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. Further action(s): The applicant is reminded of the following:

Shortly after 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90bis.1 and 90bis.3, respectively, before the completion of the technical preparations for international publication.

Within 19 months from the priority date, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later).

Within 20 months from the priority date, the applicant must perform the prescribed acts for entry into the national phase before all designated Offices which have not been elected in the demand or in a later election within 19 months from the priority date or could not be elected because they are not bound by Chapter II.

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference <b>PIS115/PCT</b>	<b>FOR FURTHER ACTION</b> See Notification of Transmittal of International Preliminary Examination Report (Form PCT/IPEA/416)	
International application No <b>PCT/KR 99/00069</b>	International filing date (day/month/year) <b>09 February 1999 (09.02.99)</b>	Priority Date (day/month/year) <b>11 February 1998 (11.02.98)</b>
International Patent Classification (IPC) or national classification and IPC <b>IPC<sup>7</sup>: H 02 K 29/00</b>		
Applicant <b>I.S. MOTOR KOREA CO., LTD et al.</b>		

1. This international preliminary examination report has been prepared by this International Preliminary Examination Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 3 sheets, including this cover sheet.

This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of \_\_\_\_\_ sheets.

3. This report contains indications relating to the following items:

- I  Basis of the report
- II  Priority
- III  Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV  Lack of unity of invention
- V  Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI  Certain documents cited
- VII  Certain defects in the international application
- VIII  Certain observations on the international application

Date of submission of the demand <b>02 August 1999 (02.08.99)</b>	Date of completion of this report <b>05 May 2000 (05.05.00)</b>
Name and mailing address of the IPEA/AT <b>Austrian Patent Office Kohlmarkt 8-10 A-1014 Vienna Facsimile No. 1/53424/200</b>	Authorized officer <b>Dimitrow</b> Telephone No. 1/53424/340

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.  
PCT/KR 99/00069

## 1. Basis of the report

1. With regard to the elements of the international application:\*

 the international application as originally filed the descriptionpages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_ the claimspages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, as amended (together with any statement) under Article 19  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_ the drawingspages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_ the sequence listing part of the description:pages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_

2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language \_\_\_\_\_ which is:

 the language of a translation furnished for the purposes of international search (under Rule 23.1(b)). the language of publication of the international application (under Rule 48.3(b)). the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

 contained in the international application in written form. filed together with the international application in computer readable form. furnished subsequently to this Authority in written form. furnished subsequently to this Authority in computer readable form. The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished. The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.4.  The amendment(s) below resulted in the cancellation of: the description, pages \_\_\_\_\_ the claims, pages \_\_\_\_\_ the drawings, sheets/fig \_\_\_\_\_5.  This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).\*\*

\* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "replaced" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).

\*\* Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.  
PCT/KR 99/00069

## V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

## 1. Statement

Novelty (N)	Claims	1-4	YES NO
	Claims		
Inventive step (IS)	Claims	2	YES NO
	Claims	1,3,4	
Industrial applicability (IA)	Claims	1-4	YES NO
	Claims		

## 2. Citations and explanations (Rule 70.7)

The following documents were cited in the search report:

D1 US 4882524 A  
 D2 US 4484115 A  
 D3 US 5327069 A  
 D4 DE 2101937 A

Document D1 shows a multi-phase bipolar brushless D.C. Motor with the features of claim 1. Each phase has a plurality of windings which however are connected in series.

Document D2 shows a brushless D.C. Motor, whose armature windings are connected together at one end and connected to respective commutating devices at the other ends.

In combination of document D1 with document D2 the subject-matter of claims 1,3 and 4 is considered not to include an inventive step. The selection of the type of circuit is a matter of normal design procedure. The skilled person would regard the necessary circuits according to the measures of claim 1, 3 or 4 as a normal design possibility in order to solve the problem posed.

Documents D3 and D4 show the state of the art only.

Industrial applicability is given for all claims.
